

Easy with DConnect!

Systems always under control

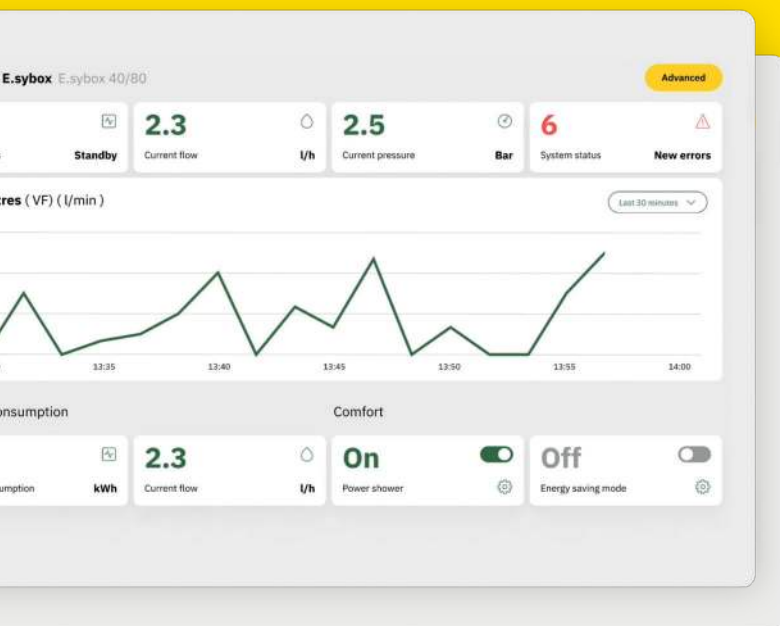

Simplified work routines

Growing business

The DConnect system combines remote control and management technologies to simplify routine work, improve customer service and suggest new sales models, combining products and services.

A digital revolution for the residential and commercial water sector.

IN PRACTICE!

1. The installations connected to DConnect are constantly monitored and parameters can be **changed remotely**.
2. **On-site interventions become prompt**, disruption times decrease and customer satisfaction improves.

3. With the list of routine maintenance to be carried out and contracts to be renewed, **work is efficiently organised**.

4. Connected installations collect data, which are then sorted by DConnect to help analyse the status of the installation. It is therefore possible to **prevent breakdowns, maintain machine efficiency** over time and **make informed design or plant integration** decisions.

5. **Selling an additional service has never been easier!** Remote control makes it easy to offer 24/7 monitoring packages and preventive maintenance.

Our idea of the future **is easy**

- DConnect is ready for use: it only takes a few  clicks to add installations to the control screen.
- The interface  is practical, intuitive, fast: we know there is no time to waste in this business!
- Information is summarised for a quick overview  and detailed when needed.

At last, a system has arrived that updates the way we work on residential and commercial installations!
