TECHNICAL CATALOGUE

THE INTERNATIONAL CERTIFICATION NETWORK

CERTIFICATE

CISQ/IMQ has issued an IQNet recognized certificate that the organization:

DWT HOLDING SPA
 VIA MARCO POLO 14 - 35035 MESTRINO (PD)
 BRENDOLA (VI) - CASTELLO DI GODEGO (TV) - BIENTINA (PI) -
 VAL LIGUNA (VS) - PRC CHINA - HUNGARY

has implemented and maintains a

Quality Management System

for the following scope:

Design, production, sale and assistance of components and electronic controls for pumps, electropumps and pump sets for cold and hot water for civil, industrial and agricultural use

Further clarifications regarding the applicability of ISO 9001:2015 requirements may be obtained by consulting the registration

which fulfills the requirements of the following standard:

ISO 9001:2015

Issued on: **2018 - 05 - 21**
 Expires on: **2021 - 05 - 27**

This attestation is directly linked to the IQNet Partner's original certificate and shall not be used as a stand-alone document

Registration Number: **IT - 824**

TECHNICAL APPENDIX

	PAG. 123		PAG. 139
---	----------	--	----------

TECHNICAL DATA

Operating range:

from 1 to 16 m³/h, with head up to 10.2 metres.

Liquid temperature range:

from 0 °C to +35 °C for domestic use.

Pumped liquid: dirty water without fibres.

Particle size for free passage of solids through the suction grid:

NOVA 180 - NOVA 200 5 mm.
NOVA 300 - NOVA 600 10 mm.

Minimum draught depth:

NOVA 180 A 77 mm
NOVA 180 NA - NOVA 200 8 mm
NOVA 300 85 mm
NOVA 600 A 175 mm
NOVA 600 NA 38 mm

Max. immersion depth: 7 metres.

Maximum dry run time: 1 minute.

Protection class: IP 68.

Insulation class: F.

APPLICATIONS

The submersible pump of the NOVA range is suitable for automatically operated fixed domestic applications for draining basements and garages that are subject to flooding.

Thanks to its compact, easy to handle shape, it may also be used as a portable pump for emergencies such as lifting water from tanks or rivers, emptying swimming pools, fountains, excavations, and pedestrian subways. It is also ideal for gardening, and hobby applications in general.

The level switch allows fixed installation, ensuring automatic operation.

Version with special stainless steel pump shaft also available (SV).

CONSTRUCTION FEATURES OF THE PUMP

Hydro resistant technopolymer pump body, cover, and suction grid.

Stainless steel motor, roto shaft, and bolts and screws.

Threefold seal with interposed rings with oil pre-chamber.

CONSTRUCTION FEATURES OF THE MOTOR

Submersible type continuous duty asynchronous motor.

Stator enclosed in airtight stainless steel casing, with an outer cover that protects the wiring and the capacitor.

Rotor running on permanently lubricated ball bearings, oversized to ensure low noise and durability.

Standard built-in thermo-amperometric protection. Capacitor permanently fitted on single phase versions.

For the protection of the three-phase motor, we recommend the use of remote overload cut-outs, in compliance with local regulations.

Construction according to CEI 2-3 and CEI 61-69 (EN 60335-2-41).

Standard voltage:	single-phase	220-240 V / 50 Hz
	three-phase	400 V / 50 Hz

Standard cables for the single-phase version:

5 metre H05 RN-F for	NOVA 180 M-A
	NOVA 300 M-A
	NOVA 600 M-A

10 metre H05 RN-F for	NOVA 180 M-A
	NOVA 200 M-NA

10 metre H07 RN-F for	NOVA 600 M-A
-----------------------	--------------

Standard plug for the single-phase version: SCHUKO CEE 7 - VII - UNEL 47166-68

Standard cables for the three-phase version: 5 metres H07 RN-F

NOVA UP

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range:

from 1 to 15 m³/h with head up to 10 metres.

Liquid temperature range:

from 0 °C to +35 °C for domestic use.

Pumped liquid: dirty water without fibres.

Minimum draught depth:

NOVA UP 300 M-A	120 mm
NOVA UP 300 M-NA	60 mm
NOVA UP 600 M-A	165 mm
NOVA UP 600 M-NA	70 mm

Max. immersion depth: 7 metres.

Installation: vertical, fixed or portable.

Protection class: IP 68.

Insulation class: F.

APPLICATIONS

The vertical delivery draining submersible pump is suitable for domestic automatically operated fixed applications, for draining basements and garages that are subject to flooding. Thanks to its compact, easy to handle shape, it may also be used as a portable pump for emergencies such as lifting water from tanks or rivers, emptying swimming pools, fountains, excavations, and pedestrian subways. It is also ideal for gardening, and hobby applications in general. This pump can be used with liquids containing solid particles of up to 10 mm in size. The level switch allows fixed installation, ensuring automatic operation. With removable filter, it is capable of suction of up to a minimum of 2/3 mm (filter removed).

CONSTRUCTION FEATURES OF THE PUMP

Hydro resistant technopolymer pump body, cover, and suction grid.

Stainless steel motor, roto shaft, and bolts and screws.

Threefold seal with interposed rings with oil pre-chamber.

CONSTRUCTION FEATURES OF THE MOTOR

Submersible type continuous duty asynchronous motor.

Stator enclosed in airtight stainless steel casing, with an outer cover that protects the wiring and the capacitor. Rotor running on permanently lubricated ball bearings, oversized to ensure low noise and durability. Built-in thermal-amperometric protection and permanently connected capacitor.

NOVA UP 600 M-AE 70 mm

Max. immersion depth: 7 metres.

Installation: vertical, fixed or portable.

Protection class: IP 68.

Insulation class: F.

APPLICATIONS

The vertical delivery draining submersible pump is suitable for domestic automatically operated fixed applications, for draining basements and garages that are subject to flooding. This version is particularly suited for narrow well installation requiring automatic suction up to 2/3 mm. Thanks to its compact, easy to handle shape, it may also be used as a portable pump for emergencies such as lifting water from tanks or rivers, emptying swimming pools, fountains, excavations, and pedestrian subways. It is also ideal for gardening, and hobby applications in general. This pump can be used with liquids containing solid particles of up to 10 mm in size. The electronic level selector allows fixed installation, ensuring automatic operation, and enabling the selection of the level of the liquid for automatic start. With removable filter, it is capable of suction of up to a minimum of 2/3 mm (filter removed).

CONSTRUCTION FEATURES OF THE PUMP

Hydro resistant technopolymer pump body, cover, and suction grid.

Stainless steel motor, roto shaft, and bolts and screws.

Threefold seal with interposed rings with oil pre-chamber.

CONSTRUCTION FEATURES OF THE MOTOR

Submersible type continuous duty asynchronous motor.

Stator enclosed in airtight stainless steel casing, with an outer cover that protects the wiring and the capacitor. Rotor running on permanently lubricated ball bearings, oversized to ensure low noise and durability. Built-in thermal-ampereometric protection and permanently connected capacitor.

VERTY NOVA

SUBMERSIBLE PUMPS WITH INTERNAL FLOAT

TECHNICAL DATA

Operating range:

from 1 to 10m³/h with head up to 9 metres.

Liquid temperature range:

from 0 °C to +35 °C for domestic use.

Pumped liquid: dirty water without fibres.

Pump priming limit:

10-15 mm in manual operation.

Max. immersion depth: 7 metres.

Installation: vertical, fixed or portable.

Protection class: IP 68.

Insulation class: F.

APPLICATIONS

The vertical delivery draining submersible pump is suitable for domestic automatically operated fixed applications, for draining basements and garages that are subject to flooding. Thanks to its compact and easy to handle shape, and the built-in float, it is suitable for particularly small draining wells (minimum 20x20 cm). It may also be used as a portable pump for emergencies such as lifting water from tanks or rivers, emptying swimming pools, fountains, excavations and underpasses. It is also ideal for gardening, and hobby applications in general. This pump can be used with liquids containing solid particles of up to 5 mm in size. The level switch with built-in float allows fixed installation, ensuring automatic operation. With easy access to the float for maintenance purposes, and automatic or manual mode selector. Minimum suction level up to 2/3 mm.

CONSTRUCTION FEATURES OF THE PUMP

Hydro resistant technopolymer pump body, cover, and suction grid.

Stainless steel motor, roto shaft, and bolts and screws.

Threefold seal with interposed rings with oil pre-chamber.

CONSTRUCTION FEATURES OF THE MOTOR

Submersible type continuous duty asynchronous motor.

Stator enclosed in airtight stainless steel casing, with an outer cover that protects the wiring and the capacitor. Rotor running on permanently lubricated ball bearings, oversized to ensure low noise and durability. Built-in thermal-ampereometric protection and permanently connected capacitor.

DRENAG 1000-1200

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range: from 3 to 28 m³/h with head up to 17 metres.

Pumped liquid: rain water, ground water, sandy water from construction sites and clean, non aggressive, waste water.

Free passage of solids: 10 mm.

Liquid temperature range:

- from 0 °C to +35 °C for domestic use (EN 60335-2-41).

- from 0 °C to +50 °C for other uses.

Maximum ambient temperature for operation with motor above water: +40 °C

Maximum immersion depth: 7 metres.

Motor protection class: IP 68

Insulation class: F

Standard voltage: 220-240 V - 50Hz single-phase.
380-415 V - 50Hz three-phase.

Installation: fixed or portable, vertical or horizontal.

APPLICATIONS

Stainless steel centrifugal submersible pump with microcast ring impeller, suitable for draining clean waste water, sandy water, muddy water with solid particles of sizes up to 10 mm without fibres. Suitable for residential applications and for construction sites, also in case of unexpected flooding.

CONSTRUCTION FEATURES OF THE PUMP

Pump body, microcast ring impeller, motor flange, filter and disc, motor casing, cable compartment casing with handle and cover in AISI 304 stainless steel. Insulating rubber covered handle. AISI 316 stainless steel motor shaft. Double mechanical seal with interposed oil chamber (non-toxic oil) in carbon-alumina on the motor side, and silicon carbide-silicon carbide on the pump side.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the pumped liquid. Rotor running on permanently lubricated sealed ball bearings, selected to ensure low noise and durability. Thermo-amperometric protection provided as standard. Permanently connected capacitor in the single-phase version.

The single-phase version can be supplied with float for automatic operation. Power cable: 10 metre H07RN-F, with UNEL 47166-68 plug for the single-phase version.

Number of poles: 2

Max starts/hour: 20

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range: from 6 to 33 m³/h with head up to 19,2 m for the single phase version, and 21,5 m for the three-phase version.

Pumped liquid: sandy water, muddy construction site water, clean waste water, rain water, ground water, fountain, river, or lake water, non aggressive.

Free passage of solids: 12 mm.

Liquid temperature range: from 0 °C to +55 °C

Max. immersion depth: 7 metres.

Protection class: IP68

Insulation class: F

Standard voltage: 220-240 V - 50Hz single-phase.
380-415 V - 50Hz three-phase.

Installation: fixed or portable, vertical position.

APPLICATIONS

Cast-iron centrifugal submersible pump with ring impeller, suitable for work site applications, designed for draining, lifting, or decanting sandy and muddy water, ground water, rain water, fountain water, clean waste water, lake and river water, containing solid particles with size up to 12 mm.

CONSTRUCTION FEATURES OF THE PUMP

Cast-iron pump body and motor casing. High resistance cast-iron ring impeller. Cast-iron suction covered with abrasion resistant rubber. Stainless steel rotor shaft, handle, filter, filter cover and bolts and screws. Inspectable oil seal chamber. Silicon carbide mechanical seal. GAS threaded 2" radial delivery port, to facilitate the installation of lifting devices (DSD 2).

CONSTRUCTION FEATURES OF THE MOTOR

Continuous duty, dry asynchronous submersible motor in watertight casing.

Rotor running on ball bearings, oversized and permanently lubricated.

Thermal protection in the winding, to be connected to the control panel.

In order to operate, the pumps must be equipped with control and protection systems, supplied separately and not connected to the electric pumps.

The single-phase version must be equipped with an MDN control panel, and built-in capacitor.

Supplied with 10 metre neoprene rubber power input cable 6x(4x1,5)+(2x0,5).

Number of poles: 2

Max starts/hour: 20

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range:

from 3 to 66 m³/h with head up to 17 metres.

Pumped liquid:

clean draining water in general, for domestic or civil use, compatible with the construction materials.

Free passage of solids: 5 mm.

Free passage: 5 mm.

Liquid temperature range: from 0 °C to 40 °C.

Maximum immersion depth: 7 metres.

Motor protection class: IP 68.

Insulation class: F.

Standard voltage: 220-240 V - 50Hz single-phase.

380-415 V - 50Hz three-phase.

Power cable: H07RN-F, 10 metres.

Installation: free, vertical position.

Continuous duty with completely submerged pump.

APPLICATIONS

Submersible electric pump suitable for construction site, industrial, or residential applications, for draining sandy, ground, meteoric, and clean waste water with solid particles with size up to 5 mm.

CONSTRUCTION FEATURES OF THE PUMP

Anodized aluminium upper cover and pump body; ENGJS 200 cast iron hydraulic body and impeller
Double mechanical seal, carbon/alumina in oil chamber on the motor side, silicon/silicon on the pump side.
GAS threaded 2" 1/2 radial delivery port.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the surrounding liquid.

Continuous S1 duty with completely submerged pump.

Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime.

Capacitor housed in the wiring compartment under the upper cover for the single-phase version.

Number of poles: 2

Max starts/hour: 20

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range:

from 6 to 54 m³/h with head up to 20 metres.

Pumped liquid: rain water, ground water, sandy water from construction site, water containing abrasive particles in general.

Free passage of solids: 6 mm.

Liquid temperature range: from 0 °C to 35 °C.

Maximum immersion depth: 20 metres (with cable of appropriate length).

Motor protection class: IP 68.

Insulation class: F.

Standard voltage: 220-240 V - 50Hz single-phase.
380-415 V - 50Hz three-phase.

Installation: fixed or portable, vertical position.

Continuous service with completely or partially submerged pump.

Power cable:

10 metres H07RN-F. Special patented steel core reinforced tear-resistant electric cable also available on request.

APPLICATIONS

Portable pumps, ideal for draining abrasive liquids in the field:

- Building, tunnel, or infrastructure construction sites
- Civil, for pedestrian subways and car parks
- Industrial, for process waters
- Open mines and caves
- Municipal, for emergency sandy water flooding

CONSTRUCTION FEATURES OF THE PUMP

Pump body made of EN GJL 200 cast iron, internally lined with high abrasion and wear resistance Nitrile (NR) rubber.

Double silicon carbide/silicon carbide mechanical seal on the pump side and carbon/alumina seal on the motor side, in oil chamber plus lip seal.

AISI 304 stainless steel suction grid

Delivery ND: 2"½

Open CRA2 650 HB chrome cast iron impeller

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof type motor, cooled by the pumped liquid. Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime. Standard built-in thermo-amperometric protection. Capacitor permanently fitted on single phase versions. Continuous S1 service with completely or partially submerged pump.

Number of poles: 2

Max starts/hour: 15

DIG 3700 - 5500 - 8500 - 11000

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range: from 12 to 240 m³/h with head up to 57.5 metres.

Pumped liquid: rain water, ground water, sandy water from construction site, water containing abrasive particles in general.

Free passage of solids: 6 mm.

Liquid temperature range: from 0 °C to 35 °C.

Maximum immersion depth: 20 metres (with cable of appropriate length).

Motor protection class: IP 68

Insulation class: F

Standard voltage: 220-240 V - 50Hz single-phase.

380-415 V - 50Hz three-phase.

Installation: fixed or portable, vertical position.

Continuous service with completely or partially submerged pump.

Power cable: 10 metres H07RN-F. Special patented steel core reinforced tear-resistant electric cable also available on request.

APPLICATIONS

Portable pumps, ideal for draining abrasive liquids in the field:

- Building, tunnel, or infrastructure construction sites
- Civil, for pedestrian subways and car parks
- Industrial, for process waters
- Open mines and caves
- Municipal, for emergency sandy water flooding

CONSTRUCTION FEATURES OF THE PUMP

Pump body made of EN GJL 200 cast iron, internally lined with high abrasion and wear resistance Nitrile (NR) rubber.

Double silicon carbide/silicon carbide mechanical seal on the pump side and carbon/alumina seal on the motor side, in oil chamber.

AISI 304 stainless steel suction grid

Delivery ND: 3" for the APT version, 4" for the MPT version

Open CRA2 650 HB chrome cast iron impeller

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof type motor, cooled by the pumped liquid. Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime. Built-in thermo-ampere protection. Continuous S1 service with completely or partially submerged pump.

Number of poles: 2

Max starts/hour: 15

GRINDER 1000-1200-1600

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range:

from 3 to 18 m³/h with head up to 23 metres.

Pumped liquid:

water loaded with filamentous matter, paper or textile material, generally for use in domestic or civil sewage waste systems without grids, compatibly with the construction materials.

Liquid temperature range: from 0 °C to 35 °C.

Maximum immersion depth:

20 metres (with cable of appropriate length).

Motor protection class: IP 68.

Insulation class: F.

Standard voltage: 220-240 V - 50Hz single-phase.

380-415 V - 50Hz three-phase.

Power cable: H07RN-F, standard length 10 metres.

Supplied with: UNI 1092 PN 6 flange

Installation: fixed using a coupling device, or free in the vertical position. Continuous duty with completely submerged pump.

APPLICATIONS

Submersible cast iron pump with grinder for lifting water loaded with filamentous matter, paper or textile material, generally for use in domestic or civil sewage waste systems without grids.

CONSTRUCTION FEATURES OF THE PUMP

ENGJL 200 cast-iron cover, motor body, hydraulic body and impeller; AISI 440C grinder.

Double carbon/alumina mechanical seal in oil chamber.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the surrounding liquid.

Continuous S1 duty with completely submerged pump.

Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime.

In the single-phase version, the pump is supplied with capacitor housed in an appropriate box with circuit breaker that enables start-up. The automatic version is also supplied with a float.

Single-phase version supplied with float and control panel with overload protection and start-up capacitors.

Number of poles: 2

Max starts/hour: 15

GRINDER 1400-1800

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range: from 2 to 9 m³/h with head up to 24,5 m for the single-phase version, and 26,5 m for the three-phase version.

Pumped liquid: grey waste water, rough loaded water containing solid matter and/or long fibre, non aggressive.

Liquid temperature range: from 0 °C to +55 °C

Maximum ambient temperature for operation with motor above water: +40 °C

Max. immersion depth: 7 metres.

Protection class: IP68

Insulation class: F

Standard voltage: 220-240 V - 50Hz single-phase.
380-415 V - 50Hz three-phase.

Power cable: H07RN-F, 10 metres.

Installation: fixed or portable, vertical position.

APPLICATIONS

Cast-iron centrifugal submersible pump with grinder, suitable for lifting and decanting dirty waste civil and industrial water. Thanks to the grinding system, the matter found in the sewage (organic waste, textiles, rubber, etc.), is ground, enabling the lifting of the liquid without the risk of clogging or obstruction in the delivery piping.

CONSTRUCTION FEATURES OF THE PUMP

Cast-iron pump body, motor casing and suction cover. High resistance cast-iron ring impeller. Microcast tempered steel grinder to ensure strength and durability. Stainless steel rotor shaft, handle, and bolts and screws. Inspectable oil seal chamber. Silicon carbide mechanical seal. GAS threaded 2" radial delivery port, to facilitate the installation of lifting devices (DSD 2).

CONSTRUCTION FEATURES OF THE MOTOR

Continuous duty, dry asynchronous submersible motor in watertight casing. Rotor running on ball bearings, oversized and permanently lubricated. Thermal protection in the winding, to be connected to the control panel.

In order to operate, the pumps must be equipped with control and protection systems, supplied separately and not connected to the electric pumps. The single-phase version must be equipped with an ED HS control panel.

Supplied with 10 metre neoprene rubber power input cable 6x(4x1,5)+(2x0,5).

Number of poles: 2

Max starts/hour: 20

FEKA 600

SUBMERSIBLE PUMPS

TECHNICAL DATA

Version with special stainless steel pump shaft also available.

Operating range:

from 1 to 16 m³/h with head up to 7,45 metres.

Liquid temperature range:

from 0 °C to +35 °C for domestic use.

Pumped liquid: cesspool sewage water.

Particle size for free passage of solids through the suction grid:

FEKA 600 25 mm

Minimum draught depth:

FEKA 600 A 175 mm

FEKA 600 NA 38 mm

Max. immersion depth: 7 metres.

Maximum dry run time: 1 minute.

Protection class: IP 68.

Insulation class: F.

APPLICATIONS

The submersible pump of the FEKA series is suitable for lifting sewage water from cesspools, and is capable of handling suspended solid matter with size up to 25 mm.

The level switch allows fixed installation, ensuring automatic operation.

Version with special stainless steel pump shaft also available (SV).

CONSTRUCTION FEATURES OF THE PUMP

Hydro resistant technopolymer pump body, cover, and suction grid.

Stainless steel motor, roto shaft, and bolts and screws.

Threefold seal with interposed rings with oil pre-chamber.

CONSTRUCTION FEATURES OF THE MOTOR

Submersible type continuous duty asynchronous motor.

Stator enclosed in airtight stainless steel casing, with an outer cover that protects the wiring and the capacitor.

Rotor running on permanently lubricated ball bearings, oversized to ensure low noise and durability.

Standard built-in thermo-amperometric protection. Capacitor permanently fitted on single phase versions.

For the protection of the three-phase motor, we recommend the use of remote overload cut-outs, in compliance with local regulations.

Construction according to CEI 2-3 and CEI 61-69 (EN 60335-2-41).

Standard voltage:	single-phase	220-240 V / 50 Hz
	three-phase	400 V / 50 Hz

Standard cables for the single-phase version:

5 metre H05 RN-F for FEKA 600 M-A

10 metre H07 RN-F for FEKA 600 M-NA

Standard plug for the single-phase version: SCHUKO CEE 7 - VII - UNEL 47166-68

Standard cables for the three-phase version: 5 metres H07 RN-F

TECHNICAL DATA

Operating range:

from 1 to 18 m³/h with head up to 12 metres.

Liquid temperature range:

from 0 °C to +35 °C.

Pumped liquid:

dirty water with maximum solid particle size 38 mm.

Max. immersion depth: 7 metres.

Maximum dry run time: 1 minute

Protection class: IP 68.

Insulation class: F.

APPLICATIONS

Powerful submersible pumps for draining and emptying applications. Suitable for pumping dirty water with solid particle size up to 38 mm. Automatic version with float switch for automatic pump start and stop also available

CONSTRUCTION FEATURES OF THE PUMP

Hydro resistant technopolymer pump body, wear-free impellers, cover, and suction grid.
Corrosion and oxidation resistant materials.

CONSTRUCTION FEATURES OF THE MOTOR

Submersible type continuous duty asynchronous motor.
Thermal overheating protection.
Wear-resistant motor shaft.

FEKA GL 750 - 1000

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range:

from 3 to 28,5 m³/h with head up to 14 metres.

Pumped liquid:

slightly loaded water, generally for use in the presence of domestic or residential sewage waste, compatibly with the construction materials.

Free passage: 46 mm.

Liquid temperature range: from 0 °C to +35 °C for domestic use.

Maximum immersion depth: 7 metres.

Motor protection class: IP 68.

Insulation class: F.

Standard voltage: 220-240 V - 50Hz single-phase.

380-415 V - 50Hz three-phase.

Power cable: H07RN-F, standard length 10 metres.

Installation: free, vertical position.

Continuous duty with completely submerged pump.

APPLICATIONS

Submersible electric pumps, generally suitable for domestic or residential use, for lifting slightly loaded and sewage water with solid matter with size up to 46 mm.

CONSTRUCTION FEATURES OF THE PUMP

ENGJL 200 cast iron motor body and hydraulic body. Fibreglass reinforced Nylon upper cover and impeller. Silicon/Silicon mechanical seal.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the surrounding liquid.

Continuous S1 duty with completely submerged pump.

Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime.

Capacitor housed in the wiring compartment under the upper cover for the single-phase version.

Number of poles: 2

Max starts/hour: 20

FEKA VS

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range:

from 0 to 32 m³/h with head up to 14 metres.

Pumped liquid: sewage water and used water in general, non aggressive.

Free passage: 50 mm.

Liquid temperature range:

- from 0 °C to +35 °C for domestic use (EN 60335-2-41).

- from 0 °C to +50 °C for other uses.

Maximum ambient temperature for operation with motor above water: +40 °C

Maximum immersion depth: 7 metres.

Motor protection class: IP 68

Insulation class: F

Standard voltage: 220-240 V - 50Hz single-phase.

380-415 V - 50Hz three-phase.

Power cable:

10 metre H07RN-F, with plug for the single-phase version.

Installation: fixed or portable, vertical position.

APPLICATIONS

Stainless steel submersible centrifugal pump with microcast steel liquid vortex impeller, suitable for lifting sewage and drain water in general containing solid matter with size up to 50 mm.

CONSTRUCTION FEATURES OF THE PUMP

AISI 304 stainless steel pump body, seal cover, motor cover, and cap with handle. Microcast steel impeller. Insulating rubber covered handle. AISI 316 stainless steel motor shaft. Double mechanical seal with interposed oil chamber (non-toxic oil) in carbon-alumina on the motor side, and silicon carbide/silicon carbide on the pump side.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the pumped liquid. Rotor running on permanently lubricated ball bearings, selected to ensure low noise and durability. Overcurrent protection as standard for the single-phase version, optional for the three-phase version. Permanently connected capacitor in the single-phase version. Continuous duty with liquid temperature 35 °C and completely submerged pump. The single-phase version can be supplied with float for automatic operation. Power cable: 10 metre H07RN-F, with plug for the single-phase version.

Number of poles: 2

Max starts/hour: 20

SUBMERSIBLE PUMPS

TECHNICAL DATA

Operating range: from 6 to 30 m³/h with head up to 14 m for the single-phase version, and 15,5 m for the three-phase version.

Pumped liquid: grey waste water, rough loaded water containing solid matter and/or long fibre, non aggressive.

Free passage: 38 mm.

Liquid temperature range: from 0 °C to +55 °C

Maximum ambient temperature for operation with motor above water: +40 °C

Max. immersion depth: 7 metres.

Installation: fixed or portable, vertical position.

Protection class: IP68

Insulation class: F

Standard voltage: 220-240 V - 50Hz single-phase.
380-415 V - 50Hz three-phase.

Power cable: H07RN-F, 10 metres.

APPLICATIONS

Cast-iron submersible pump with vortex back flowing impeller for cesspools. Suitable for lifting or decanting sewage water from cesspools, and used water in general, containing solid matter with size up to 38 mm. Also suitable for ground water, rain water, clean water and grey waste water, river or lake water.

CONSTRUCTION FEATURES OF THE PUMP

Cast-iron pump body, motor casing, suction cover, and impeller. Stainless steel rotor shaft, handle, and bolts and screws. Inspectable oil seal chamber. Carbon/ceramic mechanical seal. GAS threaded 2" radial delivery port, to facilitate the installation of lifting devices (DSD 2).

CONSTRUCTION FEATURES OF THE MOTOR

Continuous duty, dry asynchronous submersible motor in watertight casing. Rotor running on ball bearings, oversized and permanently lubricated. Thermal protection in the winding, to be connected to the control panel.

In order to operate, the pumps must be equipped with control and protection systems, supplied separately

and not connected to the electric pumps. The single-phase version must be equipped with an MDN control panel with a built-in capacitor.

Supplied with 10 metre neoprene rubber power input cable 6x(4x1,5)+(2x0,5).

Number of poles: 2

Max starts/hour: 20

TECHNICAL DATA

Impeller Type: Vortex
Solid Handling: 42mm
Nominal Power: 1.1 ÷ 2.2 kW
Outlet: DN 50
Performance Range: from 3 to 36 m³/h with 21 meters head
Fluid: wastewater and sewage from buildings and sites in private, commercial, industrial areas
Fluid PH: 6 ÷ 11
Fluid Temperature Range: from 0° to +40°C. For higher temperature please contact our sale offices.
Max installation Depth: 20mt (with a proper cable length)
Type of installation: fixed by Coupling Unit, portable in vertical position.
Equipped with: Flange UNI 1092 PN6

APPLICATIONS

Submersible electric pump for civil and industrial waste water compatible with the pump materials. Suitable for lifting sewage water, meteoric water, or dirty water in general, containing solid non-filamentous matter with diameter up to 42 mm.

CONSTRUCTION FEATURES OF THE PUMP

Cover, motor casing, pump body and impeller made of cast iron ENGJL 200
 Double mechanical seal in oil chamber Carbon Graphite / Alumina.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the surrounding liquid.
 Continuous S1 duty with completely submerged pump.
 Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime.
 For single-phase versions, the capacitor is fit in an external panel with cable plug Schuko, equipped with manual resettable overcurrent protection and float for automatic versions.
 For the three-phase versions thermal protection is required as optional.
 Max starts/hour: 20
 Insulation class: F
 Number of poles: 2
 Standard voltage: 1x230V~; 3x400V~. For other models contact our commercial department.
 Motor protection class: IP 68

SUBMERSIBLE PUMPS

TECHNICAL DATA

Impeller type: Vortex

Solid handling: 62mm

Nominal power: 0.6 ÷ 2.2 kW

Outlet: DN 50

Performance range: from 3 to 48 m³/h with 16.5 meters head.

Fluid: wastewater and sewage from buildings and sites in private, commercial, industrial areas.

Fluid PH: 6 ÷ 11

Fluid temperature range: from 0° to +40°C. For higher temperature please contact our sale offices.

Max installation depth: 20mt (with a proper cable length).

Type of installation: fixed by Coupling Unit, portable in vertical position.

Equipped with: Flange UNI 1092 PN6.

APPLICATIONS

Submersible electric pump for civil and industrial waste water compatible with the pump materials. Suitable for lifting sewage water, meteoric water, or dirty water in general, containing solid non-filamentous matter with diameter up to 62 mm.

CONSTRUCTION FEATURES OF THE PUMP

Cover, motor casing, pump body and impeller made of cast iron ENGJL 200.

Single mechanical seal pump side Carbon Graphite / Alumina, leap seal in oil chamber motor side.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the surrounding liquid.

Continuous S1 duty with completely submerged pump.

Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime.

Water infiltration sensor in oil chamber, capable of indicating water infiltrations through the mechanical seal (optional).

For single-phase versions, the capacitor is fit in an external panel with cable plug Schuko, equipped with manual resettable overcurrent protection and float for automatic versions.

For the three-phase versions thermal protection is required as optional.

Max starts/hour: 20

Insulation class: F

Number of poles: 2

Standard voltage: 1x230V~; 3x400V~. For other models contact our commercial department.

Motor protection class: IP 68

TECHNICAL DATA

- Impeller Type:** Vortex ; Single channel.
- Solid Handling:** 65 ÷ 100 mm.
- Nominal Power:** 1,1 ÷ 11 kW.
- Outlet :** DN 65 / 80 / 100 / 150.
- Performance Range:** from 4.3 to 280 m³/h with 41 meters head.
- Fluid :** wastewater and sewage from buildings and sites in private, commercial, industrial areas.
- Fluid PH:** 6.5 ÷ 12.
- Fluid Temperature Range:** from 0° to +40°C. for higher temperature please contact our sale offices.
- Max installation Depth:** 20mt (with a proper cable length).
- Type of installation:** fixed by Coupling Unit, portable in vertical position with pedestal.
- Continuous working with total submerged applications, or discontinuous S3 with respect of minimum levels.
- Approvals:** EN 12050-1 e Ex (ATEX , IECEx).

APPLICATIONS

Design for the pumping of wastewater and sewage from buildings and sites in private, commercial, industrial areas in accordance with European Standard EN 12050-1.

Available in Ex version for use in potentially explosive atmosphere (ATEX certifications: II2G Ex db k IIB T4 or IECEx: Ex db IIB T4 Gb)

PUMP CONSTRUCTION

Vortex impeller with maximum solids handling with new no-clogging shape, Single channel impeller with high efficiency and compliance with European Standard EN 12050-1. Single-unit cartridge seal with double mechanical seals, SiC-SiC at the pump side, SiC-C at the motor side. All seals are independent of rotation direction.

DN 65, DN 80, DN 100, DN150 radial slot EN 1092-1 flange discharge.

Liquid Viscosity : 1mm²/s

MOTOR CONSTRUCTION

Premium Efficiency IE3, three-phase, squirrel-cage motor. Continuously S1 rated motor in submerged applications, or discontinuous S3 according to minimum levels. Seal monitoring by a moisture sensor in the seal chamber, which signals an inspection alert if there is leakage at the mechanical seals (Optional). Bi-metallic switch in stator windings, with max temperature (130°C). Start-up: 1.1 - 4.0 kW = direct on line (DOL); 5.5 - 11.0 kW = star-delta (Y/Δ). Lubricated-for-life bearings with a calculated lifetime of minimum 50,000 hrs. Stainless steel shaft. Designed with high resistance fatigue fracture.

Degree of protection : IP 68.

Insulation class : F.

Max starting /hours : 20.

FK - RINGSTAND

The Ringstand is useful for portable installation when a rapid pump positioning in the tank is needed, ensuring high stability thanks to a large contact surface.

FEKA 6000

SUBMERSIBLE PUMPS

TECHNICAL DATA

Type of compeller: single-channel, closed

Free passage: 95 to 108 mm.

Nominal power: 15 to 24 kW

Delivery: DN 150

Operating range:

from 36 to 420 m³/h with head up to 24,5 metres.

Pumped liquid: loaded water, generally for use in civil or industrial sewage systems with grids, compatibly with the construction materials.

PH of the liquid: 6 to 11

Liquid temperature range: from 0° to +40 °C.

Maximum installation depth: 20 metres.

(with cable of appropriate length).

Installation: fixed using a coupling device, or free in the vertical position. Continuous duty with completely submerged pump.

Supplied with: UNI 1092 PN16 flange and base for free installation.

APPLICATIONS

Submersible electric pump for civil and industrial drain water compatible with the pump materials. Suitable for lifting or decanting loaded cesspool water, sewage water in systems with grids from cesspools, meteoric water, or dirty water in general, containing solid non-filamentous matter with diameter up to 80 mm.

CONSTRUCTION FEATURES OF THE PUMP

Single-channel impeller with rotating and fixed wear ring on the diffuser.

Flanged delivery port, EN 1092-1. DN 150 PN 16.

Carbon/Steel mechanical seal in oil chamber on the motor side, double SiC/SiC mechanical seal on the pump side.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the surrounding liquid. Continuous S1 duty with completely submerged pump. Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime. Water infiltration sensor in oil chamber, capable of indicating water infiltrations through the mechanical seal (standard). Overtemperature sensors in the motor windings, with 150 °C tripping threshold.

Standard voltage: 3x400V~. For other models contact our commercial department.

Start-up type: star-triangle (Y/Δ)

Number of poles: 4

Motor protection class: IP 68

Insulation class: F

Max starts/hour: 20

FEKA 8000

SUBMERSIBLE PUMPS

TECHNICAL DATA

Type of compeller: Three-channel, closed.

Free passage: 80 mm.

Nominal power: 8 to 19 kW.

Delivery: DN 200.

Operating range:

from 24 to 780 m³/h with head up to 17 metres.

Pumped liquid: loaded water, generally for use in civil or industrial sewage systems with grids, compatibly with the construction materials.

PH of the liquid: 6 to 11.

Liquid temperature range: from 0° to +40 °C.

Maximum installation depth: 20 metres.

(with cable of appropriate length).

Installation: fixed using a coupling device, or free in the vertical position. Continuous duty with completely submerged pump.

Supplied with: UNI 1092 PN 16 flange and base for free installation.

APPLICATIONS

Submersible electric pump for civil and industrial drain water compatible with the pump materials. Suitable for lifting or decanting loaded cesspool water, sewage water in systems with grids from cesspools, meteoric water, or dirty water in general, containing solid non-filamentous matter with diameter up to 80 mm.

CONSTRUCTION FEATURES OF THE PUMP

Three-channel impeller with rotating and fixed wear ring on the diffuser.

Flanged delivery port, EN 1092-1, DN 200 PN 16.

Double SiC/SiC mechanical seal in oil chamber on the motor side, Carbon/Steel mechanical seal on the pump side.

CONSTRUCTION FEATURES OF THE MOTOR

Dry, asynchronous and waterproof motor, cooled by the surrounding liquid. Continuous S1 duty with completely submerged pump. Rotor mounted on permanently lubricated ball bearings, oversized to ensure long-term reliability and extended lifetime. Water infiltration sensor in oil chamber, capable of indicating water infiltrations through the mechanical seal (standard). Overtemperature sensors in the motor windings, with 150 °C tripping threshold.

TECHNICAL DATA

Power input voltage: Single-phase 230 V \pm 10 % 50 Hz

Output voltage: Single-phase 230 V \pm 10 % 50 Hz

Output frequency: 50 Hz \pm 0,005 %

Operating temperature -20° C + 60° C

Humidity \leq 90 % without condensation

Protection class: IP 21

APPLICATIONS

SOCCORRER systems are indicated in civil and industrial installations where the powering of a single-phase 230 V electric pump is required, and the temporary power interruption could cause flooding of areas underneath the water-sewage system, which could result in damage to people and property. The new SOCCORRER systems consist of two main sections: a metal support with wall fixing system, and the body made of self-extinguishing ABS. Their innovative design makes them suitable for installation in any environment.

FUNCTIONALITY

SOCCORRER systems are completely automatic as they are managed by high performance processor, capable of controlling:

The lack of electricity network input and the need to use the battery power.

The type of battery and the charge level.

Recharging of batteries in the shortest possible time.

Starting and stopping of the electric pumps (also with safety float)

The overcurrent protection system.

Any electric pump overloads.

The automatic reset of the electric pumps.

That the pump is not operating without water.

Manual and automatic self-tests.

A free contact for remote alarm notification.

SOCCORRER systems are available with "single output" (one electric pump) and "dual output" (two electric pumps) output. In the "dual output" version, pumps can operate simultaneously, or in alternation.

SUPPLY

SOCCORRER systems are supplied with: flood prevention controller, battery connection cables, sealed battery, battery shelf. The float is supplied separate. However, it is necessary for operation with non-automatic DAB pumps.

SOCCORRER

EMERGENCY SYSTEMS

MAIN DISPLAY ITEMS

Socorrer systems are equipped with a display and an easy to use software that shows:

- the power input voltage, in V (Volts);
- the power absorbed by the electric pump when connected to the electricity power network, in VA (Volt Amperes);
- the battery recharge current when connected to the electricity power network, in A (Amperes);
- the battery voltage, in V (Volts);
- the maximum overload current, in A (Amperes);
- the number of electric pump starts when connected to the electricity power network;
- the number of electric pump starts using the energy from the batteries;
- the time of operation of the electric pump in hours and minutes, while absorbing power from the batteries;
- the total time of operation of the electric pump in hours and minutes (batteries + electricity power network);
- the number of hours of operation, which can be set by the user, in order to perform the self-test (only for electric pumps with float directly connected to the system);
- the serial number;
- the microprocessor version.

SOCCORRER

EMERGENCY SYSTEMS

SINGLE OUTPUT (1 PUMP)

The SOCCORRER KIT includes:

- Flood prevention controller preset for the connection of 1 electric pump.
- Sealed batteries*.
- Battery shelves (excluding 180 Ah batteries).
- Kit of battery connection cables.
- Instruction manual.

The pumps, the floats, and the other accessories must be ordered separately.

*** Built-in for the Soccorrer 500 model**

DUAL OUTPUT (2 PUMPS)

The SOCCORRER KIT includes:

- Flood prevention controller preset for the connection of 2 electric pumps.
- Sealed batteries.
- Battery shelves (excluding 180 Ah batteries).
- Kit of battery connection cables.
- Instruction manual.

The pumps, the floats, and the other accessories must be ordered separately.

CONNECTION TO PHOTOVOLTAIC PANELS (OPTIONAL)

The photovoltaic panels for charging the batteries, for isolated use, must be connected to the input connector underneath the equipment.

ACOUSTIC AND VISUAL ALARM

Flashing siren, powered by the batteries of the flooding prevention system, complete with activation float.

NOVAIR

SUBMERGED AERATOR

TECHNICAL DATA

Operating range: air capacity 2 to 17 m³/h for depths from 20 to 90 cm from the axis of the suction port.

Protection class: IP68.

Insulation class: F.

Pumped liquid operating range: from 0 °C to 35 °C according to EN 60335-2-41 for domestic use.

Minimum immersion depth: 20 cm.

Maximum immersion depth: 80 cm (Novair 200) 90 cm (Novair 600).

Immersion liquid: Cesspool sewage water without solid matter and fibre, clean water.

Standard voltage: single-phase: 220 – 240 V/ 50 Hz.

Power cable: H07RNF8-F, 2 m, 5 m and 10 m, with the possibility of SCHUKO plug.

Installation: Vertical.

APPLICATIONS

The submerged aerator has been designed for the aeration of sewage in small purification systems. Further uses can be the oxygenation of garden ponds, and fresh water fish farms.

CONSTRUCTION FEATURES

Technopolymer pump body, wiring cover, and impellers. Two-pole asynchronous submersible 0,18 and 0,4 kW motor with built-in thermal protection and permanent capacitor in the wiring compartment.

Steel motor shaft with ceramic treated bushing, on oversized and permanently lubricated ball bearings. Threefold seal with interposed rings with oil pre-chamber.

NOVAIR - SUBMERGED AERATOR FOR SMALL PURIFICATION SYSTEMS

Liquid temperature range: from 0 °C to 35 °C according to EN 60335-2-41 for domestic use.

The performance curves are based on kinematic viscosity values = 1 mm²/s and density equal to 1000 kg/m³. Curve tolerance according to ISO 9906.

GENIX

GENIX WL

TECHNICAL DATA

Liquid temperature range:

from 0 °C to +50 °C.

Pumped liquid:

waste water according to EN 12050-3.

Third party approval: VDE-GS, LGA, VDE-EMC.

Capacity: approved for 6 and 9 litre flushing units according to EN 12050-3.

Protection class: IP44.

APPLICATIONS

Its use is needful whenever the wastewater coming from the WC, the shower, the washbasin or the bidet cannot be expelled by gravity. GENIX models normally have a front WC connection. The difference in the GENIX WL is the side WC connection, specifically designed for WC wall-mounted installations or where there is no room enough behind the WC. In the model 130, beside the WC, three more lines can be connected, such as shower, washbasin, bidet or bathtub. The models offered stand out for silent running, even more improved in the Comfort version. The pump, powerful and reliable, and the grinding system, with blades in nickel plated stainless steel, make together a long lasting and basically daily maintenance-free product. Extremely easy the maintenance in case of clog or motor blocking, with the possibility to dismount the motor subassembly only operating on two screws, and with the unique discharge tap that will allow a clean, and free of problems, maintenance. In case of blockage, the motor unit can be accessed from the outside, with no need to remove the product. Extraordinary maintenance will be extremely easy, clean and without issues. The installation kit comes with easy-connect fittings adaptable to various pipe sections and including built-in non-return valves

Available, as accessories, an acoustic alarm anti-flooding and an adaptor pipe, to adapt the GENIX to a vast majority of existing installations.

CONSTRUCTIONAL CHARACTERISTICS

Tank in Barium 15% polypropylene. In the Comfort version, soundproof shield in Barium 70% polypropylene. Impeller in PPO 30% GF. Motor shaft in stainless steel. Grinding blades in nickel plated stainless steel.

MOTOR CONSTRUCTIONAL CHARACTERISTICS

Asynchronous motor in stainless steel.

Shaft and motor sleeve in stainless steel.

Thermal protection for overheating. Motor shaft wear resistant.

INSTALLATION

GENIX VT

AUTOMATIC LIFTING STATIONS

TECHNICAL DATA

Liquid temperature range:

From 0°C to +75 °C up to +90°C for 30 min.

Liquid pumped:

Sewage water containing fecal matter as regulated by EN 12050-3.

Third parts certifications: LGA

Tank capacity and delivery: 1-90 m³/h with dynamic head up to 8 metres

International Protection grade: IP44.

APPLICATIONS

Its use is needful whenever the wastewater coming from the WC, the shower, the washbasin or the bidet cannot be expelled by gravity. These lifting stations can be installed wherever there is the wish to add a toilet during new installations or constructions, renovations, or structural modifications. GENIX 110 has the facility to connect one high drain utility, like a washbasin; GENIX 130 has the facility to connect up to three utilities, even with low drain as a shower, bidet or bathtub.. Our models offer silent operation and reliable performance, thanks to a powerful motor which allows to work with temperatures up to 90 deg C. Extremely easy the maintenance in case of clog or motor blocking, with the possibility to dismount the motor subassembly only operating on two screws, and with the unique discharge tap that will allow a clean, and free of problems, maintenance. The non-return valves are integrated in the delivery pipe, and for the 130 models in the lateral bottom inlets. Available, as accessories, an acoustic alarm anti-flooding and an adaptor pipe, to adapt the GENIX to a vast majority of existing installations.

CONSTRUCTIONAL CHARACTERISTICS

30% barium-loaded polypropylene tank. 30% fibre-glass PPO impeller. Stainless steel drive shaft.

MOTOR CONSTRUCTIONAL CHARACTERISTICS

Induction type, stainless steel. Stainless steel shaft and cover.

Thermal cut-out protection.

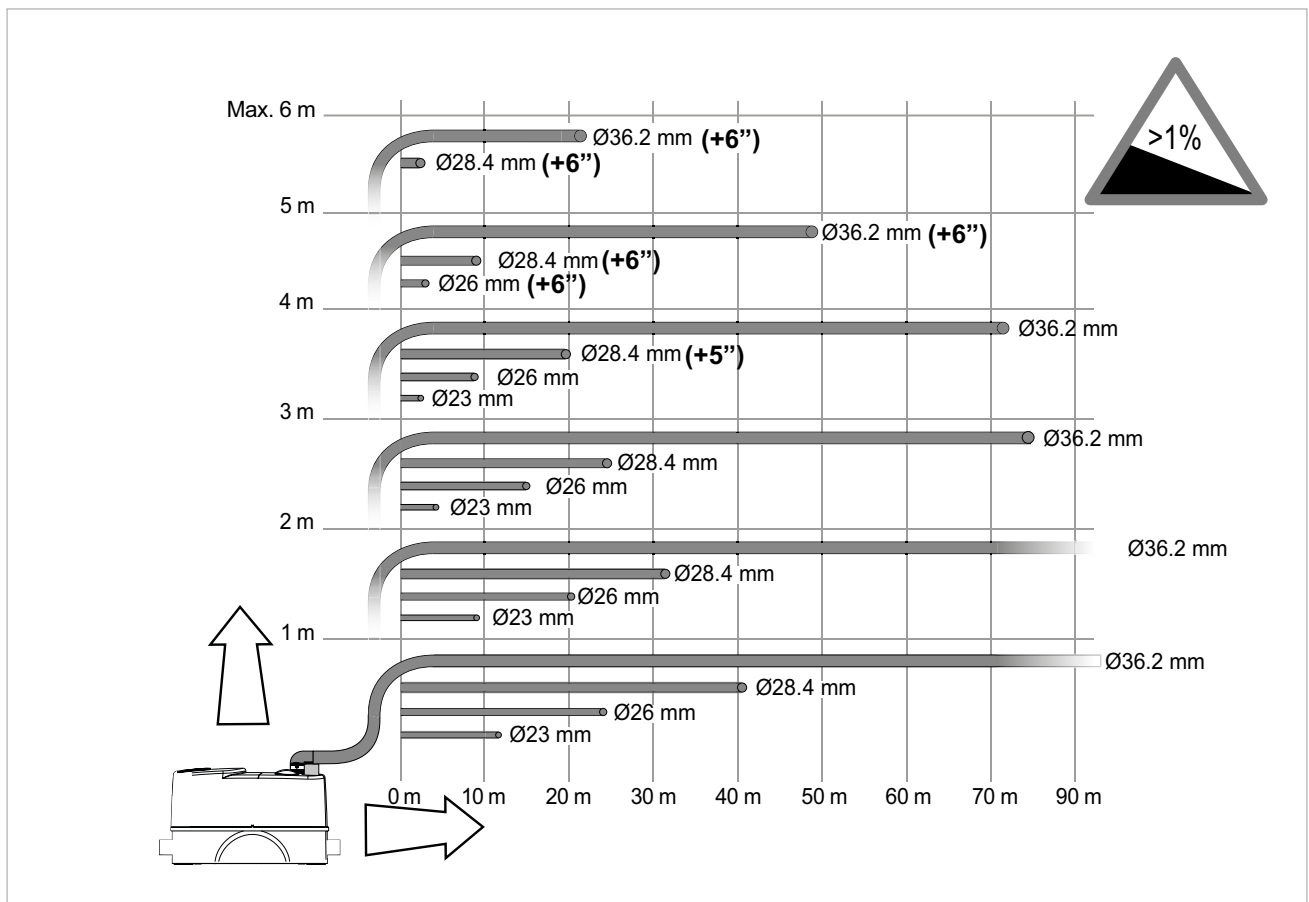

Wear-resistant motor shaft.

INSTALLATION

TECHNICAL DATA

Operating range:

from 1 to 7,2 m³/h with head up to 6,9 metres.

Liquid temperature range:

+ 50 °C.

+ 90 °C for a maximum time of 3 minutes.

Pumped liquid:

waste water without solid and/or fibrous matter.

Protection class of the motor and the pump: IP 68.

Motor isolation rating: F.

APPLICATIONS

Stations for the collection and lifting of domestic waste water from the bath, sink, shower, and washing machine in basements, or below the sewer network in general. They consist of a NOVA 300 pump with 5 metre power input cable and plug fitted on a technopolymer plate, 30 litre technopolymer tank, check valve on the delivery. The lifting station is supplied with pump with connection kit and shower float kit.

FEKABOX 110

1 PUMP AUTOMATIC LIFTING STATIONS

TECHNICAL DATA

Operating range:

from 1 to 24 m³/h with head up to 9 metres.

Liquid temperature range: + 45° C

Pumped liquid:

waste water and domestic drains.

Liquids compatible with EN12050 2.

Installation: inside the building, secured to the floor.

It cannot be driven or walked on.

APPLICATIONS

Pumping stations suitable for the collection and redirection to the sewer network, of domestic drain water (waste, dirty, rain), of basements and garages, for one dwelling, when the sewer network cannot be reached due to gravity issues. Not compatible with the alarm system.

CONSTRUCTION FEATURES

CAPACITY: 110 l

MATERIALS: LLDPE

REGULATIONS: 12050-2

CONNECTIONS

- Inputs DN 50/110
- Ventilation DN 50
- Horizontal or vertical G2" output

COMPONENTS INCLUDED:

- Complete pump installation kit (see pump installation image).
- Cable gland for individual pump
- 2" F x 1 x ¼ M connector for FEKA 600

COMPONENTS NOT INCLUDED

- Pump: to be selected according to the possible configurations.

PUMP INSTALLATION

FEKABOX 110 - AUTOMATIC WASTE WATER LIFTING AND COLLECTION STATIONS

Liquid temperature range: +50 °C

The performance curves are based on kinematic viscosity values = 1 mm²/s and density equal to 1000 kg/m³.
Curve tolerance according to ISO 9906.

FEKABOX 200

1 PUMP AUTOMATIC LIFTING STATIONS

TECHNICAL DATA

Operating range: from 1 to 24 m³/h with head up to 15 metres.

Pumped liquid: ground water, rain water, clear waste water, grey waste water, and river or lake water.

Liquids compatible with EN12050 1/2.

Maximum temperature of liquid: 45 °C

Installation: Secured to the floor if inside a building. Underground if outside the building.

It cannot be driven on, but it can be walked on, maximum weight 100 kg.

APPLICATIONS

Pumping stations suitable for the collection and redirection to the sewer network, of domestic drain water (waste, dirty, rain), of basements and garages, for one or more dwellings, when the sewer network cannot be reached due to gravity issues.

CONSTRUCTION FEATURES

CAPACITY: 200 lt

MATERIALS: LLDPE

STANDARDS 12050-1

CONNECTIONS

- DN 50/110 inputs
- DN 50 ventilation
- G2" output

COMPONENTS INCLUDED:

- 2" PP lifting device and rotation prevention bracket for FEKA VS and VX
- Cable gland for individual pump
- 2" F x 1 x ¼ M connector for FEKA 600
- FEKA VS and VX float cable stop kit

COMPONENTS NOT INCLUDED

- Pump: to be selected according to the possible configurations
- Alarm float support

PUMP INSTALLATION

-  → Recyclable material

FEKAFOS MAXI 1200 – 1700 - 2200 - 3600

AUTOMATIC LIFTING STATIONS FOR 2 PUMPS

TECHNICAL SPECIFICATIONS

Operating range: From 1 to 160 m³/h with head up to 40 m.

Liquid temperature range: + 55° C

Pumped liquid: groundwater, rainwater, clear waste water, waste sewage water and river or lake water.

Installation: Underground on the outside of a building.

Walk-over load up to 100 kg - Standard installation.

Drive-over load class D400 with appropriate coverage available as an accessory.

APPLICATIONS

Automatic collection and lifting station suitable for clear and rainwater or civil and industrial waste. Composed of a cylindrical polyethylene monoblock with a suitably shaped bottom to house the pumps and to avoid stagnation. The upper inlet is equipped with lids with locking clasps and anti-odour seals. The station is set up for the use of two single-phase non-automatic or three-phase pumps with a discharge diameter from DN50 to DN80.

CONSTRUCTION CHARACTERISTICS

CAPACITY: 1200 / 1700 / 2200 / 3600 L

MATERIALS: High density polyethylene

CONNECTIONS:

- DN DN125 / DN160 inlets
- DN 50 ventilation
- 2xDN50 / 2xDN65 / 2xDN80 outlets

COMPONENTS INCLUDED:

- 2 coupling units in grey cast iron for insertion and extraction of pumps
- stainless steel guide tubes
- PVC "T" inlet fitting
- 2 polyethylene outlet pipes
- 3 Bulb floats
- Lids with locking clasps and polyethylene anti-odour seals

ACCESSORIES ON REQUEST:

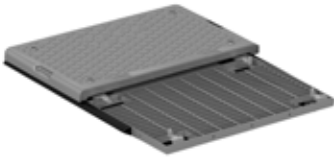

- Valve inspection section complete with two gate valves and grey cast iron check valves
- Anti-intrusion grating.
- Filter basket
- Drive-over frame D400 1200x1200 (To be fixed on site in the concrete structure surrounding the tank)

PUMP INSTALLATION

ACCESSORIES

AUTOMATIC LIFTING STATIONS

D400 DRIVE-OVER FRAME	DESCRIPTION
	<p>D400 DRIVE-OVER FRAME To be fixed on site in the reinforced concrete structure surrounding the tank</p> <ul style="list-style-type: none"> - Steel frame for anchoring on the reinforced concrete slab. - Drive-over spheroidal cast iron manhole D400 1200x1200 - Elevation and protection skirt
VALVE SECTION	DESCRIPTION
	<p>VALVE SECTION Preassembled, to be ordered with the tank</p> <ul style="list-style-type: none"> - 2 spheroidal cast iron ball check valves - 2 spheroidal cast iron gate valves - 2 PE outlet pipes
FILTER BASKET	DESCRIPTION
	<p>FILTER BASKET: Preassembled, to be ordered with the tank</p> <p>Removable stainless steel basket with inlet filter grilles 40x40 mm.</p>
ANTI-INTRUSION GRATING	DESCRIPTION
	<p>ANTI-INTRUSION GRATING: Preassembled, to be ordered with the tank</p> <p>Steel frame and grilles for the protection of the upper access to the tank.</p>

FEKAFOS MAXI 1200 – 1700 - 2200 - 3600

AUTOMATIC LIFTING STATIONS FOR THE COLLECTION AND LIFTING OF WASTE WATER

The performance curves are based on kinematic viscosity values = 1 mm²/s and density equal to 1000 kg/m³. Tolerance of the curves according to ISO9906.

e.box plus 5,5 kWatt + 5,5 kW.

e.box basic 2,2 kWatt + 2,2 kW.

Maximum current of use: 12 A + 12 A.**Starting capacitor:** Supplied as accessory KIT.**Ambient temperature operation limits:** -10 °C + 40 °C.**Air relative humidity:** 90 % at 20 °C.**Max. altitude:** 1000 a.s.l.**Protection class:** IP 55.**Display:** 1,6" for e.box PLUS D and e.box BASIC D models

Standard of reference for the construction of the control panels EN 60335-1.

APPLICATIONS

E.box is an electronic control panel that provides all the functions and protections required for the installation of a pumping set for draining, filling, and pressurisation purposes.

E.BOX PLUS is an electric control panel for automatic protection and operation of one or more submersible electric pumps or pressure booster pumps, both single and three phase, for domestic, civil, and industrial applications. Thanks to the current regulation possibility, the e.box control panel is compatible with all pump models with current between 1 and 12 A, with power up to 5,5 kW.

E.BOX BASIC is an electric control panel for automatic protection and operation of one or more single phase submersible electric pumps or pressure booster pumps for domestic applications. The e.box control panel is compatible with all single phase pump models with current between 1 and 12 A, with power up to 2,2 kW, as indicated in the product compatibility table.

CONTROL PANEL CONSTRUCTION

Supplied in an IP 55 protection class self-extinguishing thermoplastic material box, the control panel protects the electric pumps from abnormal conditions such as: overload and overtemperature (with automatic reset), short circuit (with fuses - Plus model only), pump current surges (amperometric protection), abnormal voltage, dry run, quick starts, pressure sensor fault, or inconsistency of the external protection commands.

FRONT PANEL COMPONENTS

- General disconnecter with padlockable door lock.
- AUT-0-MAN operation selection pushbuttons.
- Alarm RESET pushbutton.
- Operation, stop, alarm notification lamps.
- Display, for PLUS D or BASIC D models.

PANEL INTERNAL COMPONENTS

- Electronic control card with protection fuses and contactors.
- Power input connection terminals, single phase (L-N in the Basic version), or three phase (L1-L2-L3 in the Plus version).
- Electric pump connection terminals, single phase (L-N in the BASIC version), or three phase (L1-L2-L3 in the PLUS version).
- Terminals for the connection of pressure switches, sensors, KK thermal protection, alarm notification N.O. contacts. Operation selection dip switch: level floats or sensor, tank filling and emptying, operation with one or two pumps also for the version with display.

SOFTWARE

For the models with display, the software

- During the first installation, provides step by step guidance in the selection of the correct settings based on the actual application.
- Makes the status of the control panel and the pumps clearly and immediately visible.
- When compared to the previous model, makes it easier to change the level settings, as operation of the control panel dip switch is no longer required.

ELECTRO-MECHANICAL PROTECTION AND CONTROL PANELS

CONTROL MDN

TECHNICAL DATA

Power input voltage: 220 - 240 V.

Phases: 1.

Frequency: 50 Hz.

Rated power of use: 1,1 kW - 1,5 HP.

Maximum rated current of use: 12 A.

Starting capacitor: 40 μ F - 450 V.

Ambient temperature operation limits: -10 °C +40 °C.

Protection class: IP 55.

Storage temperature: -10°C +60°C.

Air relative humidity: MAX 95%.

Electric construction: EN 60204-1 e EN 60439-1.

E.M.C. (Emissions): EN 55014 - EN 61000-3-2-1.

APPLICATIONS

Controller for the protection and the automatic and manual operation of DRENAG 1400 M and FEKA 1400 M single-phase electric pumps. To be connected to a 2P+ 16 Amperes 220-240 V a.c. wall socket with disconnection switch and AM 10-12 Ampere fuse holder.

FEATURES

Supplied in plastic self-extinguishing box with pre-assembled bracket for wall installation.

Supplied with:

Manual reset overload protection micro circuit breaker.

Automatic reset thermal protection.

Remote switch for the operation of an optional float (available on request).

Terminal board for the connection of the electric pump and the float (if required, powered at 220-240 V).

1,5 m H07RN-F 3G1,5 power cable with EEC plug, 17-2P+Earth (16 A-220 V)

Electric connection diagram plate on the inside of the cover.

ELECTRO-MECHANICAL PROTECTION AND CONTROL PANELS

ED FOR 1 POMP

TECHNICAL DATA

Nominal power input voltage: 230V 1~ ± 10%
400V 3~ ± 10%

Frequency: 50-60 Hz.

Ambient temperature operation limits: -10 °C +40 °C.

Storage ambient temperature limit: -25 °C + 55 °C.

Relative humidity (without condensation):

50% at 40 °C MAX (90% a 20 °C).

Protection class: IP55.

Panel construction: to EN 60204-1 and EN 60439-1.

APPLICATIONS

Control panels for automatic protection and control, through digital controls (floats, pressure switches, timers, etc.), of 1 single-phase or three-phase electric pumps, with direct star/triangle start Y/D.

CONTROL PANEL CONSTRUCTION

Panel construction: to EN 60204-1 and EN 60439-1

Supplied on self-extinguishing thermoplastic material box with wall fastening bracket.

The control panel is self-protected and protects the electric pump from overload, short circuit and power loss, with manual reset, and from overtemperature, with automatic reset.

COMPLETE WITH:

Power line disconnect device with padlockable door lock handle.

Auxiliary circuit fuses.

Adjustable scale thermal magnetic protection on each motor.

Self-protected transformer to provide 24V supply for external controls.

Terminals for the connection of the electric pump, and the protection and minimum/maximum level control floats (or max/min pressure by means of pressure switches, etc.).

Powerless terminals for dry run, overflow, overpressure, sound or luminous alarm notification.

Terminals for the connection of the motor temperature sensors. Bridge fitted as standard, to be removed in case of use. (SEE THE TABLE)

Panel front Manual - Off - Automatic selector switch.

0" to 30 " adjustable switch timer, only for control panels with Y/D start.

FRONT PANEL NOTIFICATION:

Red lamp, overload protection activation.

Green lamp, pump in operation.

White lamp, auxiliary circuits working correctly.

Red lamp, dry run or maximum pressure.

ELECTRO-MECHANICAL PROTECTION AND CONTROL PANELS

E3D FOR 3 PUMPS

indicative photo

TECHNICAL DATA

Nominal power input voltage:

230V 1~ ± 10%

400V 3~ ± 10%

Frequency: 50-60 Hz.

Ambient temperature operation limits: -10 °C to +40 °C.

Storage ambient temperature limit: -25 °C to + 55 °C.

Relative humidity (without condensation):

50% at 40 °C MAX (90% a 20 °C).

Protection class: IP55.

Control panel construction: According to EN 60204-1, and UNI EN 60439/-1.

APPLICATIONS

Control panels for automatic protection and control, through digital controls (floats, pressure switches, timers, etc.), of 2 single-phase or three-phase electric pumps, with direct star/triangle start Y/D.

CONTROL PANEL CONSTRUCTION

Panel construction to EN 60204-1 and EN 60439-1

Supplied on self-extinguishing thermoplastic material box with wall fastening bracket.

The control panel is self-protected and protects the electric pump from overload, short circuit and power loss, with manual reset, and from overtemperature, with automatic reset.

COMPLETE WITH:

Power line disconnect device with padlockable door lock handle.

Auxiliary circuit fuses.

Adjustable scale thermal magnetic protection on each motor.

Self-protected transformer to provide 24V supply for external controls.

Terminals for the connection of the electric pump, and the protection and minimum/maximum level control floats (or max/min pressure by means of pressure switches, etc.).

Powerless terminals for dry run, overflow, overpressure, sound or luminous alarm notification.

Terminals for the connection of the motor temperature sensors. Bridge fitted as standard, to be removed in case of use. (SEE THE TABLE)

Panel front Manual - Off - Automatic selector switch.

0" to 30 " adjustable switch timer, only for control panels with Y/D start.

FRONT PANEL NOTIFICATION:

Red lamp, overload protection activation.

Green lamp, pump in operation.

White lamp, auxiliary circuits working correctly.

Red lamp, dry run or maximum pressure.

TECHNICAL APPENDIX

GENERAL INFORMATION

FUNDAMENTAL TERMS USED IN PUMPS

The following is a list of fundamental terms used in pumps and an explanation of their meanings. Their knowledge is necessary in order to discuss hydraulic pumps. All measurements are given in Technical units. Reference should be made to the chart for their international and Anglo-Saxon equivalents.

HEAD

Head means height, difference in level, gradient. For example if a pump has a flow of Q litres per second and a head of 30 metres, it means that it is capable of raising Q litres of liquid by 30 metres every second (therefore achieving a 30 metre gradient). For each given pump, the head is determined by its construction, such as the external diameter of the impeller and the speed of rotation, but it is not affected by the pumped liquid. This means that the pump as such can raise by 30 metres Q litres per second of water, petrol, mercury, etc.; the only difference in the three cases will be the power of the motor required.

SPECIFIC WEIGHT OF A LIQUID OR FLUID

The specific weight of a liquid or fluid is the weight per unit volume of the liquid/fluid. Specific weight is usually measured in kg/dm³ or kg/l, remembering that 1 dm³ equals 1 litre.

PRESSURE

Pressure means weight per unit of area (e.g. kg/cm²), and it should not be confused with head. In the case of liquids, the pressure that the liquid exerts on a surface is given by the product of the head (or height) of the liquid, multiplied by its specific weight. For this reason, the column of several km of air on the earth's surface produces at sea level a pressure of about 1kg/cm² (equal to approx. 1 atmosphere). If the same column were of water rather than air, the pressure would be some 700 to 800 times greater, due to the fact that water has a specific weight approximately 700-800 times greater than that of air.

Bearing in mind that a column of water 10 m high is equivalent to approx. 1 kg/cm², if we placed a manometer on the delivery of the pump, the following pressure increases would be measured:

- | | |
|--|---|
| a) with petrol (specific weight 0,7 kg/dm ³) | = 00,7 x 0,001 x 30 x 100 = 2,1 kg/cm ² |
| b) with water (specific weight 1,0 kg/dm ³) | = 00,1 x 0,001 x 30 x 100 = 3,0 kg/cm ² |
| c) with mercury (specific weight 13,6 kg/dm ³) | = 13,6 x 0,001 x 30 x 100 = 40,8 kg/cm ² |

FLOW

Flow means the quantity of liquid or fluid that passes through a point, such as the delivery outlet of a pump, or a cross section of a pipe, in the set unit of time.

This can be measured in litres per minute (l/min), litres per second (l/s), cubic metres per hour (m³/h) etc.

It should be noted that there is a perfect analogy between the flow of water through a pipe and the flow of electricity through a wire. It is sufficient to remember that hydraulic head is equivalent to electrical potential or voltage, and hydraulic flow is equivalent to electric current or amperes in electrotechnics. Even their behaviour is the same. Just as a thin wire restricts the flow of electricity more than one with a larger section, in the same way, a pipe of a smaller diameter offers a greater resistance to the flow of a liquid than one of a larger one. Just as the passage of electric current through the wire to a cable needs a voltage difference, in the same way, the flow of a liquid or fluid through a pipe needs a certain head.

There will never be a movement of liquid between two points of a perfectly horizontal pipe, and with the liquid at the same head in both points. This is due to the fact that, in the same way as the cable exerts a certain resistance to the passage of the electric current (electric resistance), the pipe also exerts a certain resistance to the passage of the fluid, the extent of which depends on the quality of the pipe (material, shape, presence of scale) and its section, and therefore the speed at which the fluid runs through the pipe. This resistance is called head loss.

HEAD LOSS

Head loss is that part of the head, possessed by the liquid, which is lost when passing through a pipe, a valve, a filter, etc. This loss cannot be recovered, as it is lost due to friction. Going back to the analogy between electrical and hydraulic phenomena, just as the losses in a cable increase in proportion with the current, so head losses are proportionally greater as the speed of the liquid increases. This means that the more the flow is restricted by scaled pipes, clogged filters, partially closed valves etc. the greater the head loss will be.

PUMP

A pump is a machine used to give a certain head to a liquid that passes through it. The head can be used to raise the liquid to a higher level, or to make it flow inside a pipe, or even in the open air, so that it covers a certain distance. The characteristics of a pump are:

- Flow** (the quantity of liquid that is moved through the pump in a unit of time)
- Head** (that is the height at which the pump is capable lifting the flow)

Based on the existing relationship between the flow and the head, it is possible to have:

- Pumps with small flow and large head (piston pumps, rotary pumps, small centrifugal pumps).
- Pumps with medium flow and medium head (centrifugal pumps in general).
- Pumps with large flow and small head (helico-centrifugal pumps, propeller pumps).

Centrifugal pumps, helico-centrifugal pumps and propeller pumps have a rotary motion and their speed is universally measured in revolutions per minute (rpm). With these machines operating at a given speed, for each given value of flow, there is only one value of head. This means that in order to increase or decrease the performance of these types of pumps, the operating speed must be varied accordingly. Basically, the liquid passing through the pump is supplied with energy that is related to the head and the speed of the liquid itself. This energy supplied within the unit of time is known as delivered power.

DELIVERED POWER

The delivered power is the power delivered by the pump to the liquid. The value of this delivered power depends on three factors: flow, head, and specific weight of the pumped liquid. The higher these three factors, the higher is the power delivered by the pump. For example, a pump delivering petrol does less work than when delivering sulphuric acid, because the specific weights of the two liquids are different.

In order to pump a liquid, a pump must be driven by a motor. In the vast majority of cases, this is either an electric, or an internal combustion motor. Electric motors use electric power, while internal combustion motors (engines) use oil or oil derivative fuels. The power that the pump needs in order to operate is called absorbed power.

DELIVERED POWER CALCULATION

Delivered power is normally expressed in kW or HP, indicating with:

Q = the flow

H = the head in metres of the column of liquid (m.c.l.)

γ = the specific weight of the liquid

The delivered power (P3) is calculated using one of the following equations:

$$P3 = \frac{\gamma \text{ (kg/dm}^3\text{)} \times Q \text{ (l/s)} \times H \text{ (m.c.l.)}}{75} \text{ in HP}$$

$$P3 = \frac{\gamma \text{ (kg/dm}^3\text{)} \times Q \text{ (m}^3\text{/h)} \times H \text{ (m.c.l.)}}{270} \text{ in HP}$$

$$P3 = \frac{\gamma \text{ (kg/dm}^3\text{)} \times Q \text{ (l/s)} \times H \text{ (m.c.l.)}}{102} \text{ in kW}$$

$$P3 = \frac{\gamma \text{ (kg/dm}^3\text{)} \times Q \text{ (l/min)} \times H \text{ (m.c.l.)}}{4500} \text{ in HP}$$

$$P3 = \frac{\gamma \text{ (kg/dm}^3\text{)} \times Q \text{ (m}^3\text{/h)} \times H \text{ (m.c.l.)}}{367} \text{ in kW}$$

$$P3 = \frac{\gamma \text{ (kg/dm}^3\text{)} \times Q \text{ (l/min)} \times H \text{ (m.c.l.)}}{6120} \text{ in kW}$$

ABSORBED POWER

Absorbed power is the power that the pump absorbs from the motor, to give to the liquid the delivered power discussed above.

Not all the absorbed power becomes delivered power, as some power is lost through friction, and even more within the pump itself, due to hydraulic losses. It is therefore clear that the delivered power is always less than the absorbed power, and the relation between the two is a number always lower than 1. This number is known as the efficiency.

YIELD

The efficiency is obtained by dividing the delivered power by the absorbed power, and is normally expressed as a percentage. For example, an efficiency of 75 % of a pump indicates that only 75 % of the absorbed power is converted into delivered power, with the remaining 25 % being lost due to friction. Therefore, the higher the efficiency of a pump, the smaller the portion of absorbed power being lost. If one then considers that the cost of energy relates to the absorbed power, it immediately becomes apparent just how important efficiency is. If we compare two pumps with the same 1 HP delivered power, but with an efficiency of 50 % for the first, and 60 % for the second, we can assume that the first one will need 2 HP to supply 1, while the second will only need 1,67 HP to achieve the same result. This means that the efficiency of a pump expresses, better than any other parameter, the quality of the pump and the related savings in terms of operating costs.

CALCULATION OF POWER OUTPUTS

P1: is the power absorbed by the motor in kW (generally indicated by the wattmeter).

P2: the power delivered by the motor in kW. This is measured at the brake (it basically is the power absorbed by the pump).

P3: the power delivered by the pump in kW.

$$\text{Power output of the motor } \eta = \frac{P_2}{P_1}$$

$$\text{Power output of the motor } \eta = \frac{P_3}{P_2}$$

$$\text{Power output of the motor } \eta = \frac{P_3}{P_1}$$

THE HEAD OF A PUMP AND ITS MEASUREMENT

The head of a pump is always the differential head, or that given by the pump itself. This is generally expressed in metres. In order to ascertain the head of a surface pump, during its operation it is necessary to measure the value of the head both at the suction and at the delivery of the pump itself, making sure that the readings are taken at the same level, which is called the reference plane. Two cases are possible, depending on installation:

- 1) the value of the head at the suction is negative (i.e. below zero shown on the manometer): in this case, the level of the liquid collected is lower than the level of the suction inlet.
- 2) the value of the head at the suction is positive (i.e. above zero shown on the manometer) in this case, the level of the liquid collected is higher than the level of the suction inlet (flooded suction).

In the first case the head of the pump is given by the sum of the two readings, while in the second it is given by subtracting the value of the head at the suction inlet from the value at the delivery outlet.

Finally, it is necessary to make sure that the readings at the suction and the delivery have been taken from apertures of the same diameter, so that they are not distorted by a difference in the speed of the liquid at the point of measurement. Any correction is made by calculating the dynamic head, or that part of the head linked with the speed of the liquid, which means that part of the head that the liquid possesses at the measuring section, due to the fact that it is moving. The dynamic head H_d , expressed in metres, is calculated using the following formula:

$$H_d = \frac{v^2}{2g}$$

where: v = speed of the fluid at the measuring point, given in m/s
 g = acceleration of gravity (9,81), expressed in m/s²
 $2g = 2 \times 9,81 = 19,62 \text{ m/s}^2$

The correction of the head is given by the difference between the dynamic head at the delivery, and the dynamic head- at the suction. It is therefore clear that if the readings upstream and downstream the pump have been taken on pipes of the same diameter, and therefore with the liquid flowing at the same speed, the correction is zero.

In order to ascertain the head of a submerged impeller pump, it is sufficient, during operation, to measure the head at the delivery port. In this case, the head of the pump is given by adding the value read to the dynamic head (always at the delivery port), and to the difference of level between the free surface of the liquid collected and the manometer.

VARIATION IN PUMP HEAD IN RELATION TO SPEED VARIATION

The performance of a pump is directly connected to its speed in rpm (n). Providing that there is no cavitation, the law of similarity may be used, which is expressed as follows:

$$Q_x = Q \times \frac{n_x}{n}$$

$$H_x = H \times \left(\frac{n_x}{n} \right)^2$$

$$P_{2-x} = P_2 \times \left(\frac{n_x}{n} \right)^3$$

For example, when doubling the number of revolutions (n_x) one obtains:

Q_x = the value of the flow doubles

H_x = the value of the head is 4 times higher

P_{2-x} = the value of the absorbed power is 8 times higher

$Q - H - P_2$ are the values at speed n

$Q_x - H_x - P_{2-x}$ are the values at speed n_x .

NOTES ON THE MOTORS OF ELECTRIC PUMPS

INDEX OF SYMBOLS USED	
P_1	: POWER ABSORBED BY THE MOTOR IN KW.
P_2	: POWER DELIVERED BY THE MOTOR IN KW OR HP.
$V \sim$	= AC POWER INPUT VOLTAGE AT THE MAINS.
Hz	= FREQUENCY IN CYCLES PER SECOND OF THE POWER INPUT VOLTAGE.
I	= CURRENT ABSORBED BY THE MOTOR IN AMPERES.
$\cos\varphi$	= POWER FACTOR.
$n^{1/min}$	= SPEED OF ROTATION IN RPM.
η	= OUTPUT POWER (RELATION BETWEEN DEVELOPED POWER AND ABSORBED POWER P_2/P_1).
p	= NUMBER OF POLES OF THE MOTOR.
Cn	= NOMINAL TORQUE OF THE MOTOR.

NO-LOAD SPEED OF ROTATION

The no-load speed of single-phase and three-phase electric induction motors is given by the formula:

$$n^{1/min} = \frac{120 \times \text{Hz}}{p}$$

No-load speed of rotation $n^{1/min}$

FREQUENCY Hz	2 POLES	4 POLES
50	3000	1500
60	3600	1800

The full-load speed is 2 to 7 % lower than the no-load speed (2 to 7 % sliding).

CURRENT ABSORBED

$$\text{Single-phase: } I = \frac{1000 \times P_2 \text{ (kW)}}{V \times \cos\varphi \times \eta} \quad \text{or: } I = \frac{736 \times P_2 \text{ (HP)}}{V \times \cos\varphi \times \eta}$$

$$\text{Three-phase: } I = \frac{1000 \times P_2 \text{ (kW)}}{1.73 \times V \times \cos\varphi \times \eta} \quad \text{or: } I = \frac{736 \times P_2 \text{ (HP)}}{1.73 \times V \times \cos\varphi \times \eta}$$

ABSORBED POWER

$$\text{Single-phase: } P_1 \text{ (kW)} = \frac{V \times I \times \cos\varphi}{1000}$$

$$\text{Three-phase: } P_1 \text{ (kW)} = \frac{1.73 \times V \times I \times \cos\varphi}{1000}$$

POWER DELIVERED AT THE MOTOR AXIS

$$\text{Single-phase: } P_2 \text{ (kW)} = \frac{V \times I \times \cos\varphi \times \eta}{1000} \quad \text{or: } P_2 \text{ (HP)} = \frac{V \times I \times \cos\varphi \times \eta}{736}$$

$$\text{Three-phase: } P_2 \text{ (kW)} = \frac{1.73 \times V \times I \times \cos\varphi \times \eta}{1000} \quad \text{or: } P_2 \text{ (HP)} = \frac{1.73 \times V \times I \times \cos\varphi \times \eta}{736}$$

YIELD

$$\eta = \frac{P_2 \text{ (kW)}}{P_1 \text{ (kW)}}$$

POWER FACTOR

$$\text{Single-phase: } \cos\varphi = \frac{P_2 (\text{kW}) \times 1000}{V \times I \times \eta}$$

$$\text{or: } \cos\varphi = \frac{P_1 (\text{kW}) \times 1000}{V \times I}$$

$$\text{Three-phase: } \cos\varphi = \frac{P_2 (\text{kW}) \times 1000}{1,73 \times V \times I \times \eta}$$

$$\text{or: } \cos\varphi = \frac{P_1 (\text{kW}) \times 1000}{1,73 \times V \times I}$$

TORQUE FACTOR

$$C_n = \frac{P_2 (\text{kW}) \times 1000}{1.027 \times n^{1/\text{min}}} \text{ in kgm}$$

$$C_n = \frac{P_2 (\text{HP}) \times 736}{1.027 \times n^{1/\text{min}}} \text{ in kgm}$$

$$C_n = \frac{702 \times \text{HP}}{n^{1/\text{min}}} \text{ in decaNewtonmetres}$$

RELATIONSHIP BETWEEN KW AND HP

$$1 \text{ HP} = 0,736 \text{ kW}$$

$$1 \text{ kW} = 1,36 \text{ HP}$$

$$\frac{\text{HP}}{1.36} = \text{kW}$$

$$\text{kW} \times 1,36 = \text{HP}$$

STARTING CURRENT (ISP)

The starting current (at switch on) of a motor is 4 to 8 times greater than the nominal current, depending on the power of the motor.

$$I_{sp} = I_n \times 4 \div 8$$

DETAILS ON CAPACITORS

The approximate current absorbed by a capacitor is:

$$I = \frac{6,28 \times F \times C \times V}{1.000.000}$$

Where:

I = current in Amps absorbed by the capacitor.

F = frequency in Hz of the applied voltage.

C = capacity of capacitor μF .

V = applied voltage.

Example:

The current absorbed by a 14 μF capacitor connected to a 220 Volt - 50 Hz power input is:

$$I = \frac{6,28 \times 50 \times 14 \times 220}{1.000.000} = 0,96 \text{ Amperes}$$

The approximate capacity of a capacitor is determined by:

$$C = \frac{I}{6,28 \times F \times V} \times 1.000.000$$

Example:

The capacity of a capacitor absorbing 1,4 Amps connected to a 220 Volt - 50 Hz power input is:

$$C = \frac{1,4}{6,28 \times 50 \times 220} \times 1.000.000 = 20,2 \mu\text{F}$$

STAR-DELTA START-UP

The normally delta Δ connected motor is connected to the network using a star type connection. The current and the starting torque are both reduced to 1/3 of the value they would be if delta Δ connected.

PROTECTION

It is recommended that motors are connected to the power input network using appropriate three-fuse thermal magnetic circuit breakers, or in any case circuit breakers complying with current local regulations.

LOAD LOSS AND SPEED TABLE

In order to accurately calculate **load losses and speed**, the following table is used:

FLOW			NEW GALVANISED PIPING

						33,15	16,51	5,1	1,45	0,65	0,32	0,17

White numbers: Load losses in m. for every 100 m of pipework

Green numbers: Water speed in m/sec

The table refers to galvanised pipework.

For other materials multiply as follows:

- 0,6 PVC pipes.
- 0,7 aluminium pipes.
- 0,8 laminated steel and stainless steel.

LOAD LOSS AND SPEED TABLE

In order to accurately calculate **load losses and speed**, the following table is used:

FLOW			NEW GALVANISED PIPING									
			NOMINAL DIAMETERS: INCHES AND MM

White numbers: Load losses in m. for every 100 m of pipework

Green numbers: Water speed in m/sec

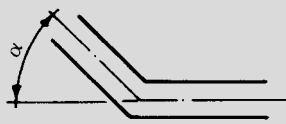

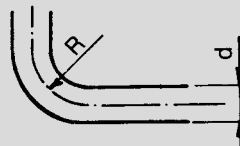

The table refers to galvanised pipework.

For other materials multiply as follows:

- 0,6 PVC pipes.
- 0,7 aluminium pipes.
- 0,8 laminated steel and stainless steel.

HEAD LOSS

in cm of column of water in bends, gate valves, and foot valves

v = velocity of water in metres per second

d = diameter of pipes in m metres

h = head loss in cm of water column for each metre of pipework, calculated according to the Lang formula:

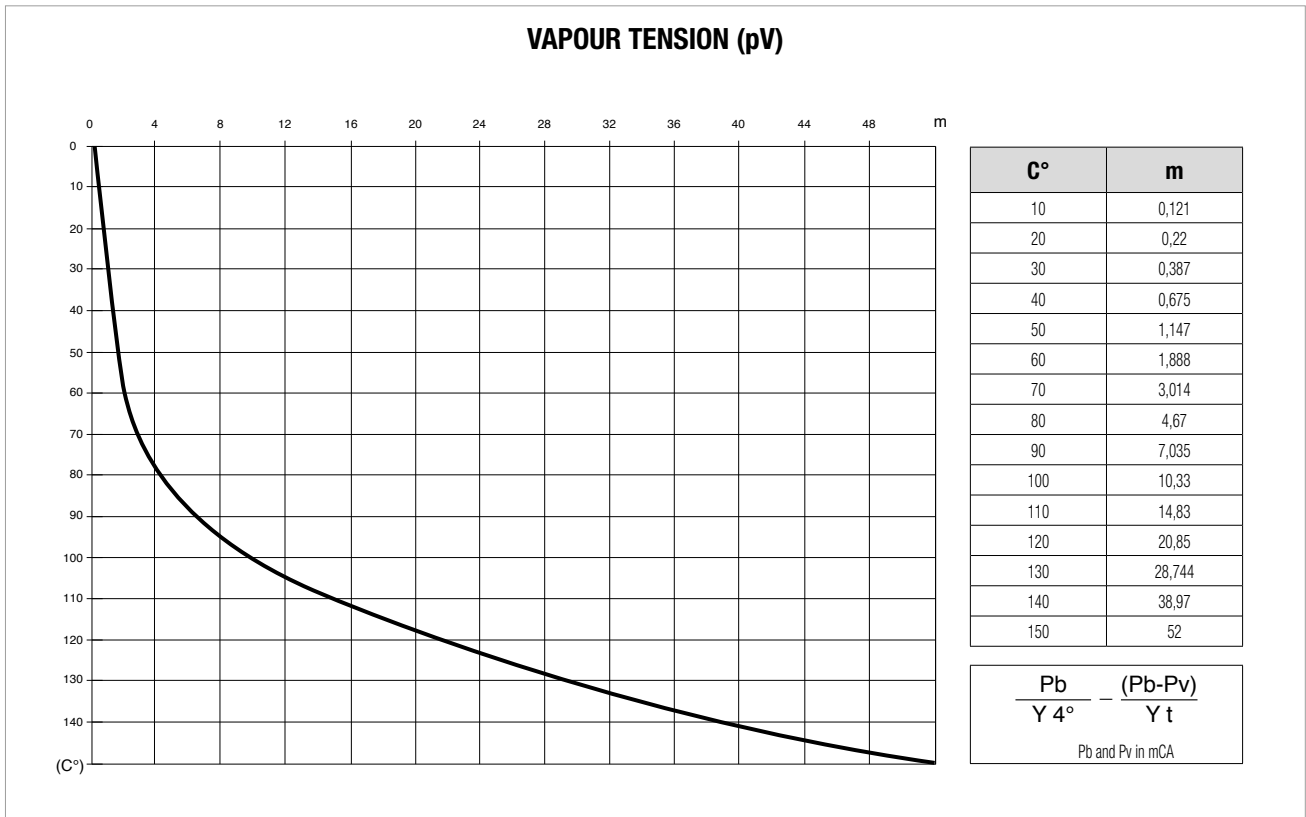

$$h = \lambda \times \frac{100}{d} \times \frac{v^2}{2g} \quad \lambda = 0,02 + \frac{0,0018}{\sqrt{v \times d}}$$

The only loss in bends is that due to the contraction of the liquid stream when changing direction (the development of the curves must therefore be included in the length of the pipework); the head loss for gate valves has been determined through technical tests.

The head loss for gate valves and normal bends is equal to that of 5 m of straight pipework, while that of non-return valves is equal to 15 m.

The values given are for pipes with a completely smooth internal surface. In case of rough or scaled pipes, allowances must be made accordingly.

VAPOUR TENSION AND SPECIFIC WEIGHT OF WATER AS A FUNCTION OF TEMPERATURE

CONVERSION TABLE FOR UNITS OF MEASURE

CHARACTERISTIC	SYSTEM UNIT OF MEASURE	UNIT OF MEASURE	SYMBOL	CONVERSIONS

Fixed system with 1 DRENAG 1400 M electric pump with DSD2 device, ED 3 M electric control panel, 2 MIN/MAX level control floats, and 1 alarm control float.

UNI EN 12050-1

PRINCIPLES FOR THE CONSTRUCTION AND TESTING OF LIFTING SYSTEMS FOR WASTE WATER CONTAINING FAECAL MATTER

CONTENTS

The standard applies to lifting systems for waste water containing faecal matter, which may also be used for the treatment of waste water not containing faecal matter, for the draining of parts of buildings and sites below the high water mark, to avoid backflow of waste water in the building. This European standard contains some general requirements, basic principles for constructions and testing, as well as information on materials and the assessment of conformity.

GENERAL PRINCIPLES

Pumping requirements

Faecal matter lifting systems must be capable of pumping waste water in accordance with the requirements of EN 12056-1, including all the solid matter normally contained in domestic waste water. They must be designed in a way that avoids the accumulation of solid matter.

The regulations require that the free passage in the lifting system for faecal matter, at any point between the point of entry of the faecal matter in the system, and the pumping device, must be 40 mm minimum.

In addition, the tank&piping system and the pump must guarantee a flow speed inside the discharge conduit of at least 0,7 m/s at the point of service.

Tank requirements

With the exception of the inlet, outlet, and ventilation ports, the collection tanks must be sealed, to prevent water and smell from escaping. The inside of the collection tank of a lifting system for faecal matter can be considered as an zone containing potentially explosive gases. In this sense, the tank and other mechanical connectors are not subjected to any special requirements, provided that the necessary measures are implemented, to avoid explosions inside the tank.

TESTS

Lifting efficiency of the system

The regulations require a specific configuration for testing the actual pumping of solid matter. The test simulate the passage of solid matter, ascertaining the transfer of 40 cm x 25 cm floor cloths. A total of 6 of them is inserted at regular interval in the pumping system. The test is passed if the lifting capabilities are not compromised, and all the floor cloths are pumped by the end of the test.

Loss tests

Seal and smell tests are also required for the tanks: the system and the discharge conduit are subjected to 0.5 bar pressure and their seal is checked for 10 minutes. The test is passed when no leaks are detected.

CONSTRUCTION PRINCIPLES

Pumping of solids

Faecal matter lifting systems must be capable of pumping waste water in accordance with the requirements of EN 12056-1, including all the solid matter normally contained in domestic waste water. They must be designed in a way that avoids the accumulation of solid matter.

Pipe connection

The size of the input, discharge, and ventilation connections must make it possible to use standard size piping. Connectors must be flexible and capable of withstanding the maximum delivery pressure of the pump without leaks.

Minimum sizes of the ventilation piping

The connector of the ventilation piping must have a minimum nominal diameter of at least DN 50.

Minimum passage of the system

The free passage in the lifting system for faecal matter, at any point between the point of entry of the faecal matter in the system, and the pumping device, must be 40 mm minimum.

Minimum size of the discharge connection for faecal matter lifting systems without maceration

Discharge connectors of faecal matters lifting points without maceration must have a minimum diameter of at least DN 80. The free passage of the check valve must be 60 mm minimum. When required, the discharge connection must be at least DN 50, and the free passage of the check valve must be at least 50 mm.

Minimum size of the discharge piping for faecal matter lifting systems with maceration

The discharge connections, the discharge piping, and the check valves for faecal matter lifting systems with maceration must have a minimum diameter of at least DN 32.

Fastening devices

Faecal matter lifting systems must include fastening devices to avoid rotation or floating.

TECHNICAL APPENDIX

INSTALLATION DIAGRAMS - GRINDER

Fixed system with 1 GRINDER 1800 T electric pump with ED 2,5 T control panel, 1 MIN/MAX level control float, and 1 alarm float.

Minimum sizes of well cover for systems with DSD2 (layout view)

Fixed system with 1 GRINDER 1400 M electric pump with DSD2 device, ED 3 M electric control panel, 2 MIN/MAX level control floats, and 1 alarm control float.

APPLICATIONS

Draining of water from basements and garages
Rain water collection wells
Draining wells
Lifting of water from tanks or rivers
Other applications
NOVA: ideal for pumping dirty water without fibres
FEKA: ideal from pumping sewage water from cesspools

FEATURES

Operating range: from 1 a 16 m³ with head of up to 10.2 metres.
Water temperature between 0 °C and 35 °C
Free passage for particles from 5 mm to 25 mm
Maximum immersion depth: 7 m
Light and easy to transport

IMPORTANT INFORMATION:

Install a support to ensure that the pump is not resting at the bottom
Do not install pipes of a smaller diameter than the delivery of the pump
Always install in the vertical position
For models with float, to ensure automatic operation, make sure that the arm or the float can move freely, without being impaired by the installation.
Do not connect the electric power input if there are people in contact with the water in the tank where the pump is installed.
Submerge the pump completely to avoid motor overheating
Make sure that there are no air pockets in the pump.

EXAMPLES OF INSTALLATION

Installation can be both above and under ground, when the overcoming of soil barriers is required for connection to the sewage network, including any that might be far. FEKAFOS may be installed in cellars, garages, underground wells.

REFERENCE	DESCRIPTION
1	Ball check valve
2	Delivery
3	Siphon
4	Ventilation
5	Power input cable
6	Collection
7	Non-return valve
8	E-BOX control panel (FEKAFOS models only)

Outdoor installation without supporting structure, buried, with sand. It can be walked on.

FEKAFOS MAXI 1200-3600 PUMPING STATION POSITIONING

Underground on the outside of a building, make a reinforced concrete support platform of adequate strength, calculated by a qualified technician. Position the tank on top of the reinforced concrete support platform and make holes in it in correspondence with the appropriate hooking seats made on the base of the product. Then insert pressure screws into the holes made and hook the tank.

In order to avoid abnormal deformations on the tanks and on the inspection towers during the backfill, always keep the water level inside the tank higher than the level of backfill. Proceed forming layers of 15/20 cm, filling the water tank first and then backfilling with light concrete, as indicated in the drawing.

Finally, cover the product with a layer of washed round gravel and sand until it is completely covered.

In the event of groundwater, having made the reinforced concrete slab, fill the tank with water until reaching the groundwater level, externally backfilling it for the same thickness with concrete.
